

CAVALRY SOLUTIONS™

PRESS RELEASE

Title: Cavalry Solutions Partners with Strategic Information Resources

Publication Date: 18 October 2010

Syracuse, NY. – Cavalry Solutions is proud to announce that it has entered into a partnership with Strategic Information Resources (www.strategicinfo.com). Cavalry Solutions and Strategic Information Resources will be working together to provide a variety of new products and services as well as developing new modules for the CavalryCompass™. Each of these new offerings will be aligned with Cavalry Solutions' primary goal – namely, reducing our clients' operating risks and exposures while concurrently reducing the "cost of compliance".

Founded in 1926, Strategic Information Resources has a long history of helping its clients make strong business decisions. Strategic Information Resources (SIR) was established as a regional provider of credit information to help financial institutions evaluate prospective loan applicants' ability to repay. Over those years SIR's service offerings have expanded, but SIR has never lost sight of the importance of customer service.

Today SIR is a national provider of credit reporting, real estate lending, appraisal management and background screening services – helping thousands of clients minimize risk every day. SIR has grown its loyal customer base by focusing on three important areas:

- **People.** SIR works hard to attract and retain employees who share our values regarding work ethics, teamwork, and commitment to customer service.
- **Service.** SIR's success over the last 80 years comes from creating a win-win situation. SIR's clients get a broad array of services as well as committed and knowledgeable support, all for a fair price. In return, SIR continues to earn their loyal repeat business.
- **Total Solutions.** Identifying and engaging with quality vendors is a critical yet time-consuming task for most companies. For that reason SIR has expanded its service offerings to continue to position itself as a single-source provider of all things related to reducing operating risk.
